

12" x 8" x 8" Wye Duct Splitter

This Duct Wye branch is the fitting to use when you need to branch off your 12-inch fan to two smaller size ducts. It is manufactured from the highest polymer material, to ensure lightweight, durability and chemical resistance. Its aerodynamic profile makes it the perfect fit for maximum performance while maintaining maximum airflow through the system and branching off to multiple locations.

With the aid of this Y-shaped tube, the two (2) ducts can be placed in the blower (on the outlet side of the equipment) to split the airflow into two separated 8-inch standard ducts, with maximum efficiency and thus meeting the requirements for use in Hazardous Locations and Explosive Atmospheres. Strong-tough-durable, it will not crack or break apart.

For more information about the application. Please check our spec sheet for Aircraft Fuel Tank Ventilation Kit.

Specifications
